Change-Log Version 0.11.8:

- Increasing the data security due to advices of external experts
- Implementation of a VPN-solution for up to four simultaneous VPN connections

In order to obtain the necessary data security during the access on your facility from the internet, please observer the following advices:
- Please use a VPN connection for the access
- Please assign a password for visualisation access
- In large-scale projects, please use a separate network for the building automation

Change Log Version 0.11.7:

- Job Editor Week-Timer: Time setting over the list view is disabled.
- User management in the Editor: Fixing a bug after saving changed access rights.
- HTTP Req Response Evaluation: Now umlauts can be used without any problems in the expression.
- Graph Data Export (CSV): Records will now be exported sorted.
- On the start page the dialog for choosing the different visualisations can be also closed now by clicking on any other area of the page.
- Room element: Fixing the calendar view when accessing it over the visualisation.
- Fixing the bug at the restore of HTTP-Req Job: The group addresses that were eventually entered in the input arrays of the value objects were be filled into the output arrays of the response evaluation at the same time.
- Hysteris Unit: Factor and Offset are now available at EIS 5 in the input.
- Job Editor mask: The selection arrays from the logic and light scene job are widen now.
- Enhancement Mathematics: Access on the output value is possible now.
- Mathematics: Fixing bug at „unary plus". Out of a „+5" a „-5" is made because the operand is used inverted.
- Enhancement Mathematics: Logical and bit by bit negation available.
- Enhancement Mathematics: If-then-else operator
- Enhancement Mathematics: With the help of a new variable the group address which launches the calculation can be used.
- Enhancement Mathematics: Using the group addresses from the input object as numbers or as text.
- Enhancement Mathematics: The output group addresses can be changed by specific using of variables.
- Enhancement Mathematics: At the input it can be decided for each at which condition the calculation is been done.
- Visualisation: The function „Prevent deformation" also applies for the ajax visualisation now.
- Job documentation: Adjust the documentation of the light scene and the staircase lightning function.
- Job documentation: The comparator now is also part of the job documentation.
- Fixing Bug in the element „Top Consumer": Were there no group addresses entered in the ajax visualisation the referring page did not load further anymore.
- New Element: Web Container. This is an element for embedding web pages. It is only working in the ajax visualisation.
- Staircase lightning function job: Fixing the false description about the flag „stop".
